The Growzilla 2.0 is a hydroponics grow box for 9 plants.

## New seedbank **Paradise Seeds**

After 12 years of growing, testing and experimenting with many different cannabis varieties, Paradise Seeds was founded in 1994. About 25 years ago, in Amsterdam, new types of seeds were introduced from the USA which were early crossbreeds of already higher quality. Since then Paradise Seeds got involved in the early research for better quality strains. This took place in Amsterdam and at several outdoor locations in Holland.

## Sweet Purple Feminized **by Paradise Seeds**

Sweet Purple is a hybrid of 3 varieties: a purple variety, an early-finishing / large-yielding Dutch variety and an exceptionally potent strain. As the name implies, this strain most of the time keeps the coloration of the purple parent, while gaining sweetness and potency from the Dutch part of the family.

This mostly Indica mix was especially bred for outdoor gardens in temperate climates. Sweet Purple is a strong variety that has the additional benefit of resisting mold. These vigorous plant stand up to cold, wet climates and grow to a full height of about 2.5 meters and can yield 500 grams per fully matured plant.

Sweet Purple shows some variation, and potency can vary from average to wow from one plant to another. The coloration also ranges, with some plants turning completely purple while on others, only the buds take on that royal hue.

Sweet Purple has a strong herbal, minty bouquet underlined by a sweet tone.

The high is a pleasant bodily sensation, but also retains a lucid edge that may increase your sense of concentration.
